

**YOU HAVE JUST FACED A SITUATION
THAT IS DIFFICULT TO UNDERSTAND
AND EXPLAIN.**

**Unfortunately, now is not a good time to
discuss this, but if you contact us later,
you will get more information.**

Autism spectrum disorder (ASD) is a neurobiological developmental disorder. This affects how a person communicates and interacts with others, as well as how he or she senses and experiences the world around him or her.

Persons with ASD have sensory issues, such as over- or under-sensitivity to sounds, lights, touch, smells, tastes or colours.

The goal of Autism Finland is an autism-friendly society that recognizes the diversity of the autism spectrum and enhances the right to a good life for people with autism spectrum and those close to them.
